VETH RUDDER PROPELLERS

MAXIMUM MANEUVERABILITY

The basic principle of a rudder propeller is simple and effective. The propeller rotates 360° around its own vertical axis to guarantee maximum maneuverability in all directions.

Our azimuth thrusters are available in either Z- or L-drive configurations and can be powered by any power source; the control for its azimuth steering system can be either electric or hydraulic. The thruster units are available with open propeller, contra-rotating propellers or with a nozzle. The Veth Control Systems are developed in-house by our R&D department. Veth Propulsion has developed the Veth Integrated L-drive with a permanent magnet (PM) motor, which has extremely low mounting space requirements.

By stocking the standard parts for every one of our thrusters, we can provide fast service when needed.

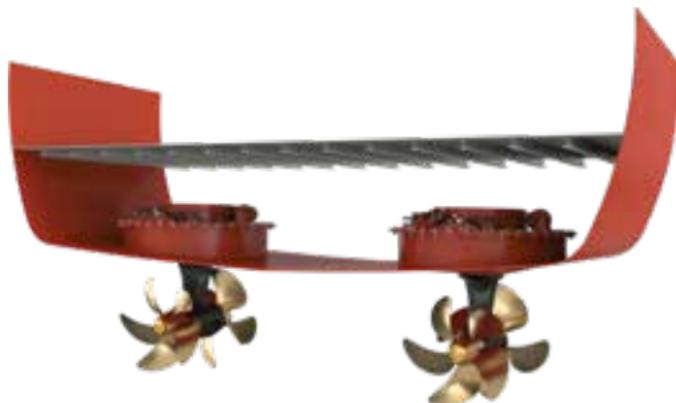

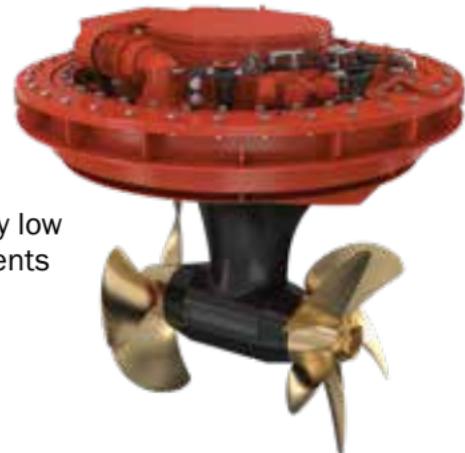

Z-DRIVE

- 360° full thrust for optimal maneuverability
- 2% more efficiency than with a conventional propeller
- Possibility for flexible suspension (better insulation from noise and vibration)
- Ability to change propeller without docking
- Simple to install
- More room for passengers/cargo due to compact construction
- No separate gearbox needed
- Ideally suited for Dynamic Positioning (DP)
- Safer, through shorter emergency stopping distance and improved maneuverability

INTEGRATED L-DRIVE

- Compact design; extremely low mounting space requirements
- High efficiency
- Quiet
- Low weight
- Built using proven Veth Propulsion technology
- Outstanding maneuverability due to the 360° thrust
- Electric motor inside the ship; fewer vulnerable components underwater
- Simple to install
- Slip ring cabinet unnecessary
- Optimal flow of water thanks to 'Shark Tail' on contra-rotating propeller

VETH CONTROL SYSTEMS

PROVEN TECHNOLOGY

Like all of our products, our control systems are also developed and produced in-house. The Veth Control Systems (VCS) offer you the opportunity to read out, monitor and analyze data and alarms. The choices Veth Propulsion makes are based on dynamic and proven technologies from the automotive industry.

CONTROL PANEL

KEY PANEL

FRONT DISPLAY THRUSTER

DRIVEN BY SIMPLICITY

Veth Propulsion has its own R&D department for electronics, which is engaged with in-house development, innovation and improvement of our control systems on a daily basis. This is in line with the everything-under-one-roof principle and offers several advantages. Simplicity for you as a key user and for service purposes is most important in the continuous development of our control systems.

FEATURES & BENEFITS

- Fast service
- Single contact point
- Sufficient stock
- In-house knowledge and skills
- Not dependent on others
- Interfacing with third-party systems is developed and maintained internally, such as DP, Pilot and VDR interfaces
- The Veth Autopilot interface provides the ability to control the thruster asynchronously
- The DP interface provides safety around the DP control

MARINE CONTROL DRIVES

FIELD PROVEN, MODERN DESIGN

Capitalizing on more than 30 years of rugged applications, the new Twin Disc Marine Control Drives (MCD) Series offer distinct operating advantages for any vessel requiring highly accurate positioning or extreme slow-speed maneuverability while splitting main engine power to operate high-powered FiFi pumps or other auxiliary gear. Power capacities now range from 1680 to 5250 kW (2250 to 7040 HP).

FEATURES & BENEFITS

- Provides operating advantages for vessels requiring highly-accurate positioning
- Used in conjunction with Azimuth Thruster systems
- Best alternative to controllable pitch propellers (CPP)
- Dynamic positioning (DP) capable
- High-capacity PTO to drive auxiliary equipment
- Emergency “come home” device per classification requirements
- Smooth, gradual propeller speed change resulting in improved maneuverability
- Safer and easier vessel control during slow speed maneuvering and docking
- Adjustment of propeller speeds below engine speed rating
- Divides the power from the main propulsion engine to eliminate the need for auxiliary engines
- Delivers an instant response when required
- Bearing calculated for high universal joint angles at maximum power
- Compared to controllable pitch propeller (CPP), the Marine Control Drives can be serviced inboard without the need to dry-dock or diver support
- Slipping from engine idle to wide open throttle; Twin Disc expert application team will help customize to any desired operator requirement

LD MODELS	
Model	kW/rpm
2000-1-LD	1.20
2000-2-LD	1.60
2000-3-LD	2.00
4000-1-LD	2.40
4000-2-LD	2.80
4000-3-LD	3.20
4000-4-LD	3.60
4000-5-LD	3.75

HD MODELS		
Model	kW/rpm	Dissipation
2000-1-HD	1.20	100 kW
2000-2-HD	1.60	130 kW
2000-3-HD	2.00	160 kW
4000-1-HD	2.40	190 kW
4000-2-HD	2.80	225 kW
4000-3-HD	3.20	250 kW
4000-4-HD	3.60	290 kW
4000-5-HD	3.75	330 kW
5000-1-HD	3.75	400 kW
5000-2-HD	3.75	450 kW

VETH BOW THRUSTERS

Many Veth bow thrusters are part of the shallow draft family. A major advantage of a horizontal propeller (shallow draft) is that optimum thrust is achieved at minimum draft, without vulnerable parts sticking out beneath the vessel. The shallow draft thrusters provide high thrust even at cruising speed, because the propeller draws up the water over a short length.

VETH JET

The Veth Jet channel bow thruster, an invention of Jan Veth, was launched in 1970 in response to market demand for a thruster that could function optimally at 360° with a shallow draft.

VETH COMPACT JET

The Veth Compact Jet can be found only at Veth Propulsion. A special feature of the Veth Compact Jet is that the propeller is placed at an angle of 17°. In practice, this means more efficiency and higher thrust on a sailing vessel.

VETH STEERING GRID

With a Veth Steering Grid, you achieve optimal thrust at minimum draft, even at speed and with no parts extending from beneath the vessel. The Veth Steering Grid makes use of existing technology found in the successful Veth Jet, such as the worm wheel and gear transmission.

VETH COMPACT GRID

The Veth Compact Grid offers the advantages of two existing Veth solutions: the simplicity of the Veth Steering Grid and the angled propeller of the Veth Compact Jet.

Each vessel is unique and it may be that a regular tunnel thruster does not meet your needs. Veth Propulsion also offers aluminum, flexible mounted (combined with air injection), elbow or retractable tunnel thrusters.

TWIN DISC HYDRAULIC THRUSTERS

RELIABLE AND HIGH PERFORMING

Our years of experience in propulsion technologies have brought Twin Disc to the development of our thrusters line. Compact design and easy installation make Twin Disc hydraulic thrusters a favorite among major boatyards.

FEATURES & BENEFITS

- Combines the need for higher thrust requirements and longer working cycles with the builders' need to control the total weight and dimensions, and the final system cost
- Bow- and stern-mounting options
- Complete range for applications up to 130'
- Double counter-rotating propeller
- Transmission gears built in high-tensile materials
- High-quality materials suitable to the marine environment
- Wide range of hydraulic components in different sizes for a complete system and different configurations
- Compact leg design for a low hydrodynamic resistance
- Reduced noise
- 'Brand name' hydraulic components for easy access to spare parts
- Easy installation
- Conforming to the highest production standards

HYDRAULIC THRUSTER TECHNICAL DATA

Model	Nominal Thrust Kgf • N (lbs)	Tunnel I.D. mm (in)	Nominal Power kW (hp)	Weight kg (lbs)
BP 220	220 • 2158 (485)	250 (9.83)	18.7 (25)	24 (53)
BP 300	300 • 2943 (661)	300 (11.80)	28.5 (38)	35 (77)
BP 400	400 • 3924 (881)	355 (14)	35 (47)	45 (99)
BP 550	550 • 5886 (1322)	400 (15.75)	48.5 (65)	75 (165)
BP 600	600 • 5886 (1333)	450 (17.72)	60 (82)	85 (189)

These values are intended to be indicative. The performance of each thruster depends on several different factors and on the sizing of the hydraulic components. Contact the Twin Disc Applications Engineering Department for suggestions on the most suitable configuration at applications@twindisc.com.

QUICKSHIFT® MARINE TRANSMISSIONS

QuickShift®
BY TWIN DISC

FAST, SMOOTH SHIFTS

No other marine transmission in the world shifts as fast and smooth as the Twin Disc QuickShift, yet it provides amazing control at near zero vessel speed.

FEATURES & BENEFITS

- Patented, completely internal and integrated clutch actuating system
- Regulates engine torque at extremely low speeds to slow the propeller speed down to 50 rpm or less – allowing you to maneuver at near zero boat speed, an incredible advantage in docking
- Instantly delivers cushioned torque to the driveline when shifting from neutral to anywhere from full ahead to full reverse
- Eliminates driveline shock while optimizing power to the driveshaft
- Steep but smooth power curve (full out or at slow speeds)
- Superior maneuvering control
- Instant power to propeller

TWIN DISC POWER COMMANDER™

ULTIMATE CONTROL IN YOUR HANDS

Leading the industry in quality, style and performance, the Twin Disc EC300 Power Commander electronic control system is designed to interface with all popular electronic engines and transmissions. It is versatile, rugged and easy to install. With literally one finger on one lever, the operator can control the boat's speed and direction. Multiple drivetrains and multiple control heads can easily be accommodated. Multiple electronic control stations can be placed around the boat.

FEATURES & BENEFITS

- Single lever control
- Selectable synchronization
- Trolling valve control option
- J1939, RS232, RS485 coms
- Allows up to eight control stations
- Cast aluminum control boxes with stainless steel levers (two length options)
- Express Joystick System® ready
- Selectable station transfer rules
- Individual station active indicators
- Individual station neutral indicators
- 12 and 24 volt system power compatible
- Full functionality of QuickShift gears
- Independent port/STBD J1939 CAN-bus communication links
- Hall Effect lever position sensors provide enhanced reliability and longest shifting life possible

EXPRESS JOYSTICK SYSTEM® (EJS®)

DON'T BUY YOUR NEXT BOAT WITHOUT IT

The Twin Disc Express Joystick System (EJS) absolutely revolutionizes docking and slow speed maneuvering of diesel powered, conventional shaftline boats.

With easy fingertip movements you control direction and speed – instantaneously and intuitively.

No luggering. No lurching.

No clunking. All thanks to proven QuickShift transmission and EC300 control technology.

FEATURES & BENEFITS

- “Push, twist and go” directional maneuvering
- Proven QuickShift transmission and EC300 control technologies
- Simultaneously and instantaneously controls engines, transmissions and thrusters
- During docking, eliminates steering wheel and control lever activities
- Effortlessly move the boat in any direction and even pivot on its own axis
- Extremely intuitive responsiveness
- Ergonomically friendly
- Remarkably easy to learn
- Interfaces are available for non-Twin Disc thrusters, please contact Twin Disc for availability

EXPRESS POSITIONING®

MAINTAIN POSITION WITH THE TOUCH OF A BUTTON

Based on the award-winning EJS, Express Positioning maintains a vessel in a fixed position and heading at the touch of a button. A dedicated, highly accurate and reliable GPS receiver determines the vessel's exact location and heading and the Twin Disc EC300JS controller commands the Twin Disc QuickShift transmissions and Twin Disc proportional hydraulic thrusters to smoothly and instantaneously maintain the precise station coordinates and heading.* Never before have shaft line boats been able to so effortlessly hold position.

FEATURES & BENEFITS

- Works only in conjunction with Twin Disc Express Joystick System
- Maximum power available to continuously hold station without producing excess heat or wear
- Compatible with single- and twin-engine applications
- Compatible with twin-engine bow or bow/stern thruster applications
- Can be retrofit to existing EJS applications
- Based on years of experience with Dynamic Positioning systems in commercial vessels
- Only QuickShift transmissions provide the smooth, responsive shifting and propulsion control required
- QuickShift transmissions and precision hydraulic thrusters provide ultra fine maneuvering control at low thrust levels

* Vessel position may not be maintained in all sea and weather conditions. Captain is responsible for the safe operation of the vessel.

EXPRESS JOYSTICK SYSTEM (EJS)

Sample Diagram

1 EC300: Standard control system for up to seven digital stations and up to eight engine/transmission shaft lines per vessel.

2 EC300JS: Express Joystick System option for up to six joystick stations.

3 Color display option (shown).

4 Available GPS option, station-keeping, Express Positioning System.

5 Twin Disc QuickShift transmissions required.

PLEASE CONTACT TWIN DISC OR A TWIN DISC AUTHORIZED DISTRIBUTOR FOR MORE DETAILS.

EC300DP ELECTRONIC CONTROL SYSTEM

TOTAL PROPULSION CONTROL

The Twin Disc EC300DP propulsion control package allows instantaneous, shockless and virtually constant forward and reverse shifting to keep supply vessels on station as directed by the craft's dynamic positioning system. Twin Disc Power Commander Electronic Controls give you total control with electronic precision and, literally, fingertip ease. With only one lever required per engine, you can control your boat's speed and direction with one hand. You get responsive control over the entire speed range.

FEATURES & BENEFITS

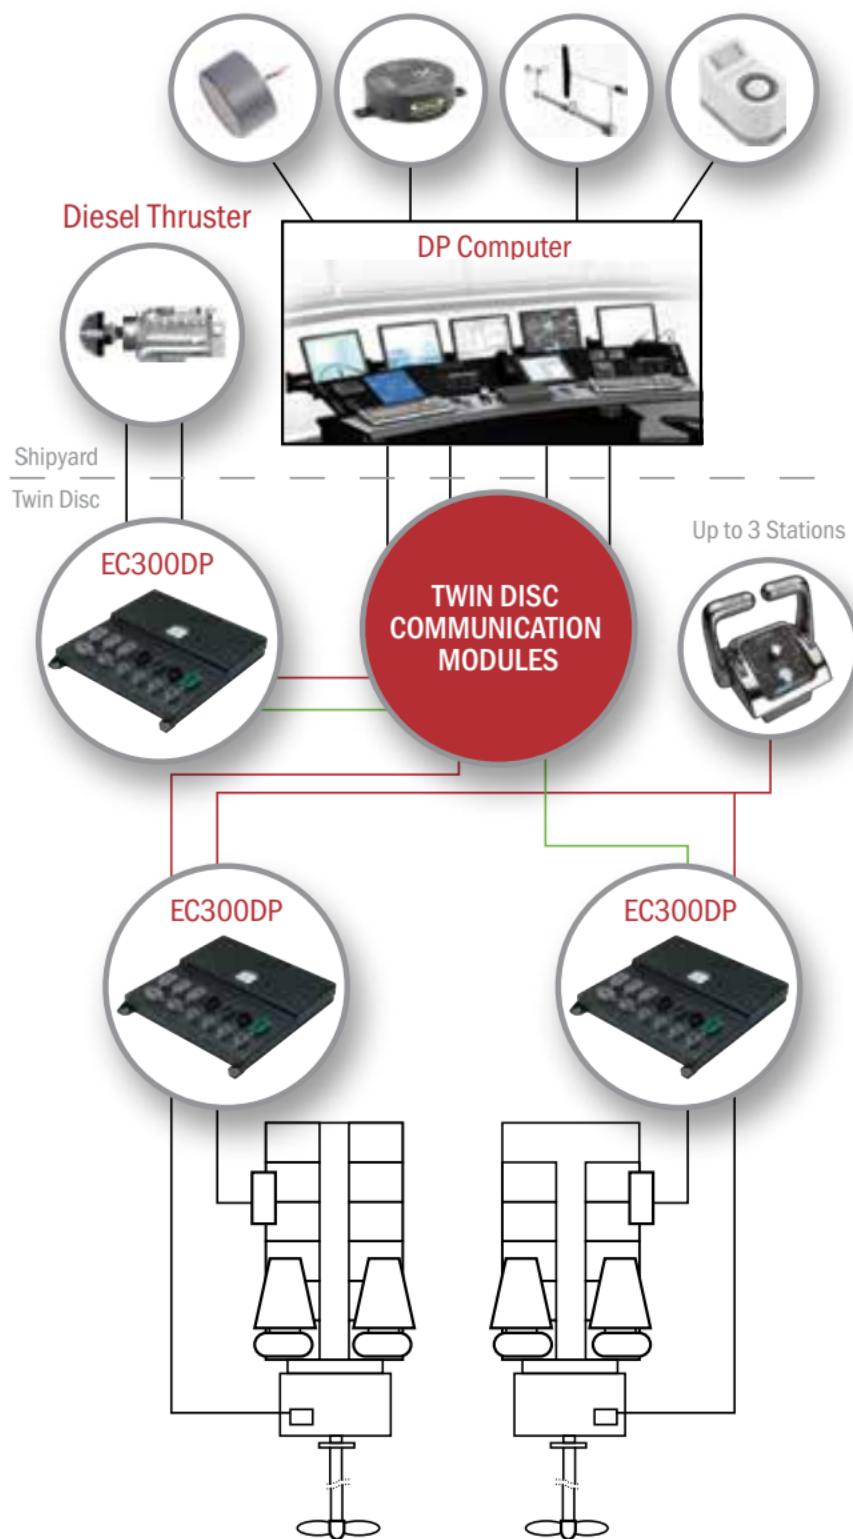

- High thrust rate change competitive with alternative drive packages
- More than 30x/minute directional reversals
- Designed for conventional shaft lines with QuickShift transmissions
- Linear thrust control from 10% of idle engagement to full engine power
- Maintain fuel-efficient engine speeds even at low propeller speeds
- Meets DP2 requirements
- Enhanced installation, monitoring and maintenance/service software
- Versatile, rugged and easy to install
- Designed to interface with all popular electronic engines and DP systems

POWER COMMANDER™

≡ QUICKSHIFT®

DP INTERFACE SYSTEM (EC300DP) – Sample Diagram

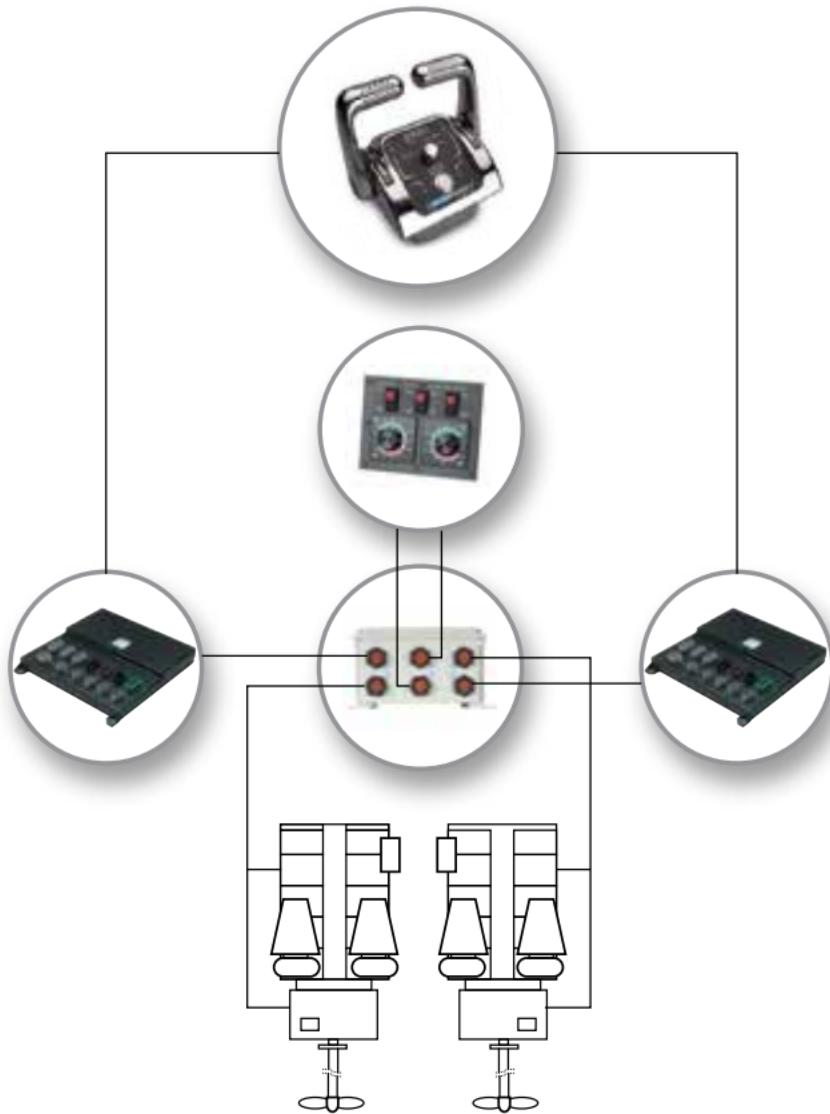

1. The Twin Disc EC300DP control system is suitable for DP0, DP1 and DP2 vessels with conventional propellers and two (2) or more engine/transmission drivelines.
2. Twin Disc QuickShift transmissions required.

PLEASE CONTACT TWIN DISC OR A TWIN DISC AUTHORIZED DISTRIBUTOR FOR MORE DETAILS.

BACKUP PROPULSION CONTROL SYSTEM

Twin Disc-Supplied Operator Panel

For use with EC300 Power Commander and Twin Disc marine transmissions.

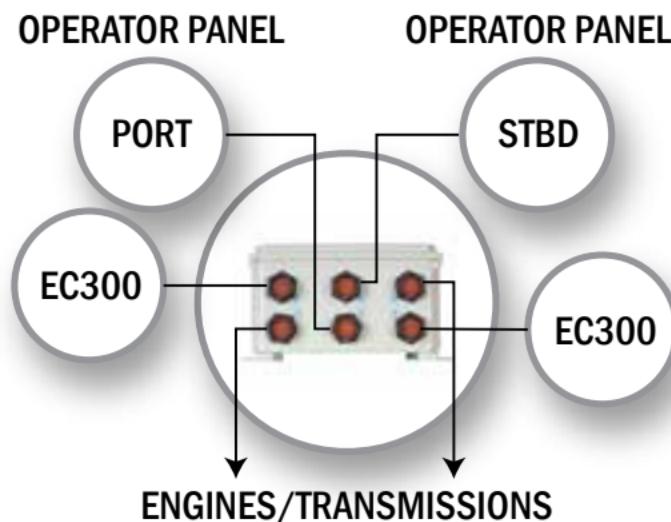

EC300 POWER COMMANDER

POWER COMMANDER™

BY TWIN(DISC)

Customer-Supplied Local Operator Panel

FEATURES & BENEFITS

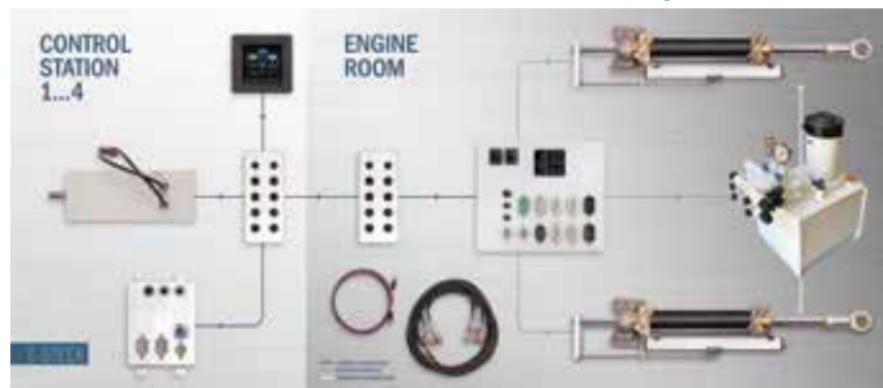

- Provides fully redundant and independent propulsion control of EC300 Power Commander systems with electronically-governed engine and Twin Disc QuickShift and standard marine transmissions
- Includes a twin engine interface box, operator panel and associated harnesses
- Interface box developed to be plug and play with Twin Disc QuickShift and standard marine transmissions configured for EC300
- Intuitive operator panel with integrated throttle/transmission control knobs
- 4-20mA standard throttle signal (contact factory for other options)
- Backup engine and marine transmission commands can be received directly from a compatible, customer-supplied local operator panel in place of the Twin Disc operator panel
- Interface box has integral “direction confirmation” feedback for engine systems which require potential free contacts to confirm ahead, neutral, astern
- Integrated neutral start interlock to inhibit engine start when either the backup system is commanding clutch engagement, or the marine transmission manual override is engaged
- Two interface boxes and operator panels can be used for backup on triple or quad-screw vessels
- Option for backup control of Twin Disc marine transmission with internal shaft brake

E-STEER™ POWER STEERING SYSTEM

Introducing E-STEER (ES4000), Twin Disc's latest generation power steering system, based on CAN bus communication architecture and 24VDC and 380V AC hydraulic power packs. The ES4000 complements our existing line of hydraulic steering systems, power assisted hydraulic systems, and electronic over AC powered hydraulic power packs.

FEATURES & BENEFITS

- Dual Bus Technology: Every system has redundant CAN bus communication cables. If one bus is taken down, the system still operates off the other bus.
- Optional Dual Control Systems: While a single control system can operate two rudder systems, addition of a second control module provides further redundancy to operate secondary hydraulic rudder systems in the event of a failure of the primary system
- Dual Power: Each control has a primary and secondary power input, with audible alarms for loss of either supply
- Manual Control Option: A hydraulic helm unit can be installed for further backup of the electronic system
- Speed Sensing™ adaptive steering with dynamic rudder control
- Color display with intuitive graphics of rudder position, system operating status, and fault conditions
- Auto-pilot interface
- Joystick tiller option
- Active helm unit has option for auto-return to center
- Station transfer for multiple helms
- Electronic tie-bar feature
- Programmable for tuning steering system for optimal vessel performance

— CAN-BUS CONNECTION ••• ELECTRIC HARNESS — HYDRAULIC CONNECTION

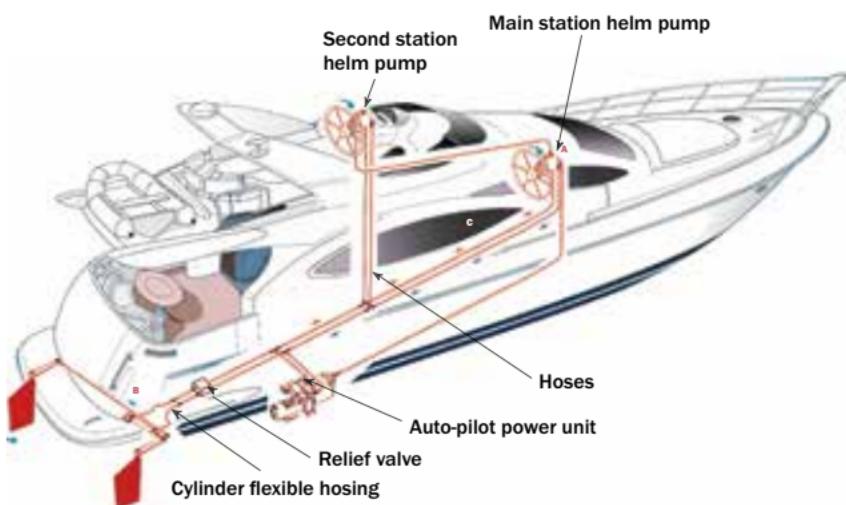

TWIN DISC STEERING SYSTEMS

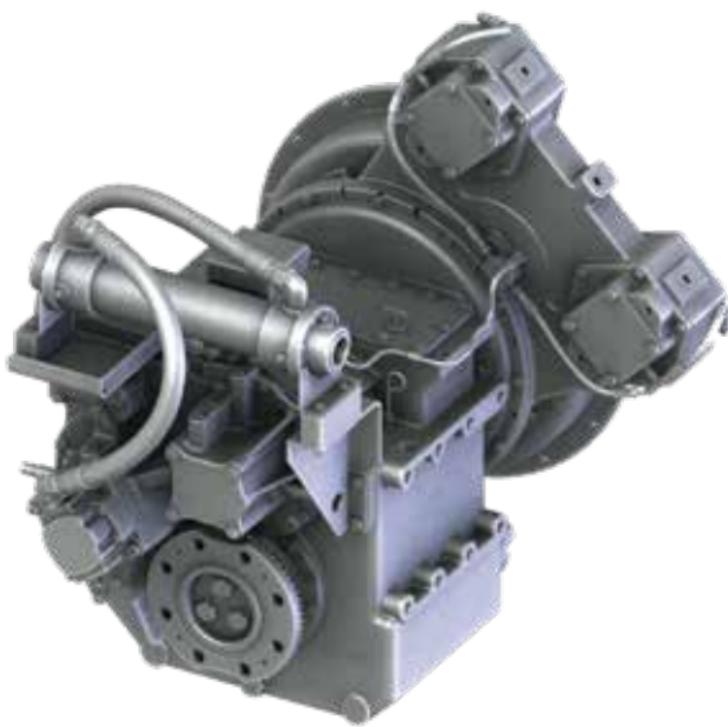

HYDRAULIC AND ELECTRONIC OPTIONS

Our steering systems are a combination of selected materials, innovative design and state-of-art technical solutions. All components are built with high precision systems and tooling to meet the requirements of the best survey authorities such as RINA, Lloyd's Register, ABS and Bureau Veritas.

FEATURES & BENEFITS

- Wide variety of possible configurations
- Suitable for either small/medium pleasure boats and commercial vessels
- Highly-flexible and efficient electronic systems are suitable for applications up to 230'
- Electronic systems support over 100 application types
- Decades of experience in the production of electronic power-assisted steering
- Ensure performance and durability
- Hydraulic cylinders and helm pumps can handle many different applications.

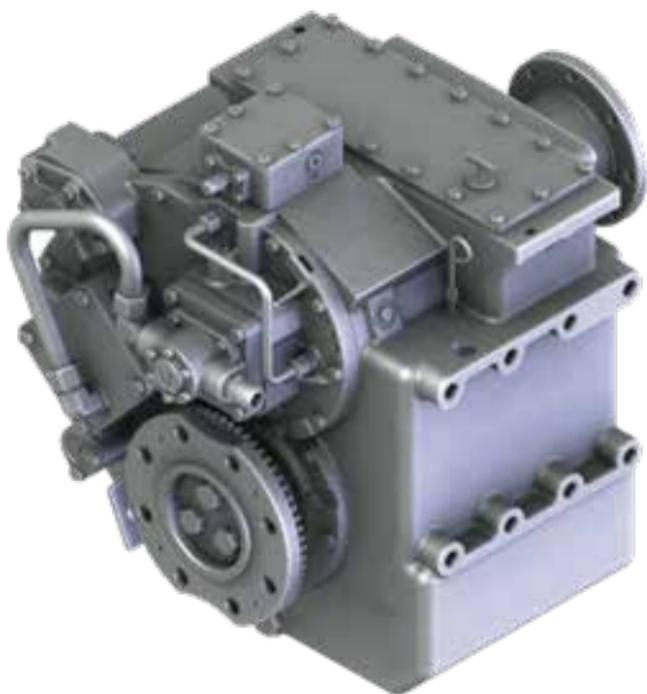

RELIABLE EXTRA CAPACITY

The MGXT-5202SC has built upon the proven reliability of the MGX-5202SC marine transmission, combined with an industrial pump tower. The pump tower can be mounted in multiple orientations to suit the installation requirements for applications where multiple pads for hydraulic pumps are needed. This model is well suited for applications where additional pump pad capacity is required, such as dredges.

FEATURES & BENEFITS

- Two towers with two pump pads each
- 224 kW (300 HP) maximum capacity per tower
- 358 kW (480 HP) maximum capacity for both towers
- SAE #0 & SAE #1 input housing
- Pump tower rotatable by 0°/45°/90° CW
- Available pump pads:
SAE “A” • SAE “B” • SAE “C” • SAE “D”
- Standard marine transmission ratings apply

RESPONSIVE POWER

Twin Disc has taken its field-proven marine transmissions and created the MGE Series of gearboxes. This design provides power from the motor immediately in both clockwise and counter-clockwise directions. All units are equipped with a bi-directional oil pump to provide lubrication no matter the direction of shaft rotation, making these units a perfect fit for serial hybrid applications or any application requiring a direct power response with a ratio reduction.

FEATURES & BENEFITS

- Bi-directional lubrication pump
- Simplified design without a clutch
- Same installation envelope as standard marine transmission
- Standard marine transmission ratings apply
- SAE #0, SAE #1 input housing & freestanding applications
- SAE 460 (18") & SAE 355 (14") input coupling
- Type Approvals and Certifications available upon request
- Available models: MGE-5204SC and MGE-5126SC; other models by request

ARNESON® SURFACE DRIVES

SPEED IS JUST THE BEGINNING

Mechanical innovator and offshore racing enthusiast Howard Arneson perfected the performance and reliability of surface-piercing propulsion. Twin Disc then made Arneson Surface Drives available for non-racing applications — pleasure craft and commercial vessels, as well as military applications. Arneson Surface Drives are renowned as the most reliable and proven surface-piercing propulsion system with decades of successful applications in pleasure, commercial and military vessels.

FEATURES & BENEFITS

- Cleaner hull, trimable drive shaft and adjustable angle
- Completely eliminates cavitation, thus increasing propeller performance while reducing cavitation erosion
- Manufactured for maximum duty applications and to last the life of the vessel using high-quality, corrosion-resistant materials matched to exacting tolerances
- Models designed to fit virtually every powerplant option, accommodating torque outputs exceeding 16,500 lb-ft
- Can be combined with Twin Disc QuickShift transmissions and EC300 control systems

MODEL		ASD08	ASD10

ARNESON®
BY TWIN DISC

- Accelerate faster and achieve higher top end than conventional drives
- Reduce underwater drag by 50% compared to conventional submerged propeller drive systems and provide more efficient thrust
- Can reduce engine costs while maintaining performance
- Better payload-to-power ratio
- Outperforms waterjets in high-speed applications

A NEW LEVEL OF PERFORMANCE AND CONTROL

Based on the robust Twin Disc EC300 electronic control platform, Mastertrim is a programmable trimming system which adjusts the trim of the Arneson Surface Drive and the vessel's trim tabs or interceptors to preset positions based on vessel speed and operator-selected modes.

FEATURES & BENEFITS

- Four operating modes selected to suit conditions
- Select manual mode by simply pressing the mode switch, or by manually trimming any one of the drives or tabs
- On-board diagnostics constantly monitor the health of the electronic controls system and displays instant feedback
- No special electronics needed for system troubleshooting
- Frees the operator to focus on driving the boat, rather than adjusting the propulsion system
- Easily programmed during vessel commissioning via the supplied display; the system will guide the operator through static and dynamic calibrations

Current installations supported:

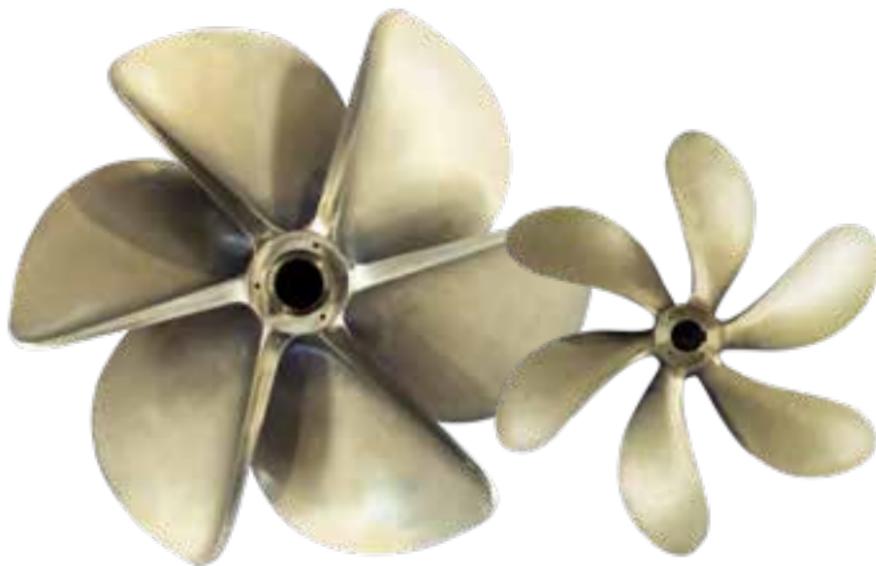

- Twin drive with trim tabs or interceptors
- Tabs or interceptors are required
- Single helm station only

System make up:

- Electronic controls
 - EC300MT control
 - MT display
 - Valve driver module
 - Interface to ship's GPS
 - Driveline speed sensors
 - Trim and steering position sensors
 - Interface to customer-provided trim and mode switches
 - Optional analog gauge kit
- **Hydraulic system:**
 - Twin Disc-supplied integrated trim and steering manifold must be used

MASTERTRIM™
BY TWIN DISC

ROLLA™ PROPELLERS

ROLLA™ BY TWIN DISC

ULTIMATE PROPELLER PERFORMANCE

Since 1963 the name Rolla has been synonymous with the highest quality, most efficient propellers in the world. What started with Philip Rolla individually designing and crafting race-winning propellers has grown to become the leader in propeller technology for high-performance pleasure and commercial craft and military vessels.

FEATURES & BENEFITS

- Rolla stainless steel and NiBrAl propellers range from 16 inches to 10 feet in diameter
- Specifically custom designed for high-performance shaftline or surface drive applications
- Wide variety of service for every aspect of propeller design, manufacture and application
- Offers complete hydrodynamic analysis and engineering capabilities to computational fluid dynamic (CFD) hull analysis to sea trials

TWIN DISC CUSTOM BUILT SHAFTLINES

THE ESSENTIAL LINK

For over 60 years the Italian yachting industry has used our custom built water-lubricated shaft lines. As part of its integrated solution, Twin Disc offers the essential link between marine transmissions and submerged propellers, regardless if your vessel is a commercial craft, a luxury superyacht or a military vessel.

Each system is built to match the specific parameters of your vessel and can be approved by major classification societies such as Rina, BV, LRS and ABS.

SYSTEMS INCLUDE:

- Propeller shaft (multiple stainless steel grades available)
- Stern tube in various materials with bearings and seals in several types and sealing brands
- Shaft bracket(s) – various shapes and materials available
- Propeller nut and cathodic protection
- Half coupling, if required, available in many technologies
- Flange and required bolts

When fitted with our marine transmissions, electronic controls and propellers, you get the guarantee of a single-source propulsion specialist.

TWIN DISC CUSTOM BUILT RUDDERS

CUSTOMIZED MANEUVERABILITY

As we do with shaftlines, Twin Disc designs, builds and supplies custom built rudders as part of its steering system.

We adapt to your needs and constraints without compromising on the maneuverability and reliability of your vessel. Steering is essential whether you run a passenger vessel, a patrol craft or a large luxury pleasure craft.

Our cast or welded rudders are made of marine bronze or high-grade stainless steel. Our team of welders is certified by major classification societies and our design follows the strictest rules of these same certification bodies.

SYSTEMS INCLUDE:

- Rudder assemblies – multiple types, shapes and materials available
- Rudder tube assemblies in various materials with bearings and seals
- Tiller arm
- Tie bar, if required
- Flange and required bolts

When fitted with our electronic or hydraulic steering systems, you get the guarantee of a single-source steering specialist.

If your vessel is 15m – 60m, please contact us.

SEAPROP 60 SAILDRIVE

SAILING EASE AND VERSATILITY

The SeaProp 60 saildrive is a propulsion system for sailboats with engines rated up to 56 kW (75 hp) @ 3600 rpm. Sailboat manufacturers and operators alike benefit from this system's unique but proven design.

FEATURES & BENEFITS

- Easy, space-saving installation
- Eliminates propeller shaft along with stuffing box, cutless bearing, stern tube and strut
- Can be matched with a variety of fixed or foldable propellers
- Sailboat manufacturer will overcome inherent limitations and problems of conventional inboard shaft drive installations with a quicker, more versatile and simplified engine installation process
- Easily mounted facing forward or aft
- Not constrained by shaft angle and offers the builder more versatility in engine placement and a smaller 'footprint' (no shaft, stuffing box, or strut aft of the engine)
- Increased propulsion efficiency as the thrust is parallel to the boat's waterline
- More efficient, quieter, creating less vibration to the boat and providing an all-around smoother experience
- No water leakage into the bilge through the stuffing box

SAILDRIVE SP60 TECHNICAL DATA

RATIO		INPUT RATINGS – PLEASURE KW (HP)		
Forward	Reverse	2800 rpm	3000 rpm	3600 rpm
2.15	2.15	43 (59)	46 (63)	55 (75)
2.38	2.38	34 (46)	36 (50)	44 (60)

Max Input Speed: 3800 rpm

Dry Weight: 43 kg (94 lbs)

Oil Quantity: 2.8 liters (0.7 gallons)

TWIN DISC TRIM TABS

PERFORMANCE, SAFETY AND EFFICIENCY

Twin Disc offers trim tab systems in stainless steel and aluminum. Both are available in a large variety of dimensions and can be combined with four different hydraulic kits, satisfying many different requirements and covering a wide application field. A large selection of accessories are available to complete both stainless and aluminum systems and aid in easy and efficient use.

FEATURES & BENEFITS

- Stainless steel offers highest corrosion resistance
- All Series MY3000, MY4000 and MY5000 are available in the simple tab (single plate) type for smaller boats or with lower loads, and the reinforced tab (reinforced plate) for larger applications
- MY3000 Series tabs are provided with a welded connection cylinder

Performance improvement

- Stern lifting and better balance
- Faster planing
- Better propeller efficiency for more in-line power
- Listing correction
- Decrease of yawing and wandering with cruising quality improvement

Safety improvement

- Better and greater visibility
- Better maneuverability at low cruising speed

Efficiency improvement

- Better engine performance
- Reduced fuel consumption
- Staying on plane even at slower cruising speed

NOTES

SERVICE CLASSIFICATION DEFINITIONS

PLEASURE CRAFT

Up to 500 hours/year, low load factor usage planing hull vessels where typical full engine throttle operation is less than 10% of total time. The balance of operation at 80% of full engine throttle or less. Marine transmissions for use in long range pleasure cruisers, sportfish charter boats/patrol boats do not qualify for Pleasure Craft Service.

Note: Some revenue-producing applications such as Planing Hull Bristol Bay Gillnetter do qualify under Pleasure Craft rating definition.

LIGHT DUTY

Relatively low hour usage (less than 1500 hours/year) where full throttle operation is 2 hours out of 12. Typical applications include planing hull vessels such as fire boats, sport-fish charter boats and patrol/customs boats. This rating is also applicable to some bow and stern thruster applications.

INTERMEDIATE DUTY

Hour usage of up to 2000 hours/year (for models MG(X)-5114 and smaller) and up to 3000 hours/year (for models larger than MG-5114) with 50% of the operating time at full engine rating.

Typical applications include planing hull vessels such as ferries, fishing boats, some crew boats, and also some displacement hull yachts as well as some bow and stern thruster applications.

MEDIUM DUTY

Hour usage of up to 4000 hours/year with up to 80% of operating time at full engine power. This duty classification is for usage where some variations in engine speed/power occur as part of normal vessel operation.

Typical vessels include mid-water trawlers, crew/supply boats, ferries and some inland water tow boats.

CONTINUOUS DUTY

For use in continuous operation with little or no variation in engine speed/power settings.

Typical vessels include fishing trawlers, tow/tug boats and ocean going vessels.

SPECIAL APPLICATIONS

Some applications such as Dynamic Positioning (DP), Wind Farm Service, and others, require Twin Disc Factory Approval.

IMPORTANT APPLICATION INFORMATION

- Transmission ratings are based on use of the transmission in a torsionally compatible system utilizing a suitable input torsional coupling.
- Ratings are for diesel engines at the indicated speeds, unless otherwise indicated.
- Ratings are shown in SAE horsepower (HP).
- Consult factory for ratings applicable to gasoline engines, gas turbines, or other applications not conforming to the given service class definitions.
- Ratings apply to right hand engines (i.e., counter-clockwise flywheel rotation when viewing rear of engine).
- Transmission ratings should equal or exceed the engine's published ratings for the given application.
- Final marine transmission selections are to be confirmed prior to issuance of the purchase order. For unusual or unique applications, please contact Twin Disc, Inc. for product selection assistance.
- Marine transmission input couplings provided by Twin Disc are configured to interface with engine flywheels which conform to SAE J620 standards. Please consult Twin Disc when use of non-standard flywheels are considered.
- Most of the transmissions listed herein are to be mounted directly on the SAE flywheel housing of the engine. It is necessary that the engine crankshaft endplay be measured before the driven equipment is installed and rechecked after the driven equipment is installed. The endplay measurements, before and after transmission installation, should be the same. If not the same, the driven equipment should be removed and the problem source located and corrected before the engine is started. Engine crankshaft endplay measurement is considered mandatory.
- The given data is subject to modifications/corrections without prior notice.
- Use certified print for installation.

IMPORTANT NOTICE

Disregarding propulsion system torsional compatibility could cause damage to components in the drive train resulting in loss of mobility. At minimum, system incompatibility could result in gear clatter at low speeds.

The responsibility for ensuring that the torsional compatibility of the propulsion system is satisfactory rests with the assembler of the drive and driven equipment.

Torsional vibration analysis can be made by the engine builder, marine survey societies, independent consultants and others. Twin Disc is prepared to assist in finding solutions to potential torsional problems that relate to the equipment of Twin Disc Incorporated's supply.

Use certified drawings for installation.

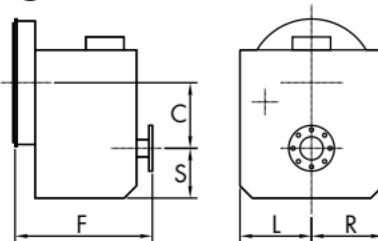

Dry weights are approximate and vary by input and ratio.

Specifications are subject to change without notice.

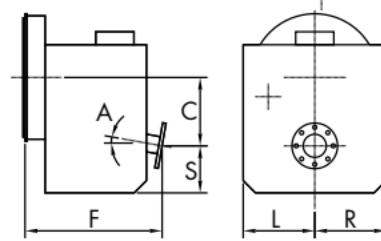

Dimensions may vary with housing adapter or output flange.

VETH Z-DRIVE SPECIFICATIONS

TYPE OF NOZZLE

Veth Propulsion uses two types of nozzles: VG40 and VOB50 (optimized nozzle 19A).

VOB 50 is often used with tug- and push boats. The Bollard Pull efficiency is 2–3% higher than a VG40 nozzle. VG40 is recommended when high thrust at higher speeds and sailing performances are relevant.

TYPE OF PROPELLER

For speeds of 12–14 knots, an open propeller is a better choice than a nozzled propeller. Contra-rotating (CR) propellers are an excellent option with regard to efficiency (at different speeds) for vessels with a top speed between 10–20 knots which require a low noise level. The propellers can be used for various applications such as megayachts, ferries and passenger vessels. The CR propellers are a combination of high-efficiency, small propeller diameters and low-noise propulsion.

THRUSTER FOUNDATION

RIGID WELDED SUSPENSION

The thruster can be welded into the hull of the vessel; all foundation elements will be welded as an integrated part of the vessel.

RIGID BOLTED SUSPENSION

The thrusters can be built into the vessel on a rigid suspension foundation, where the thruster is bolted directly onto the bottom well.

FLEXIBLE SUSPENSION

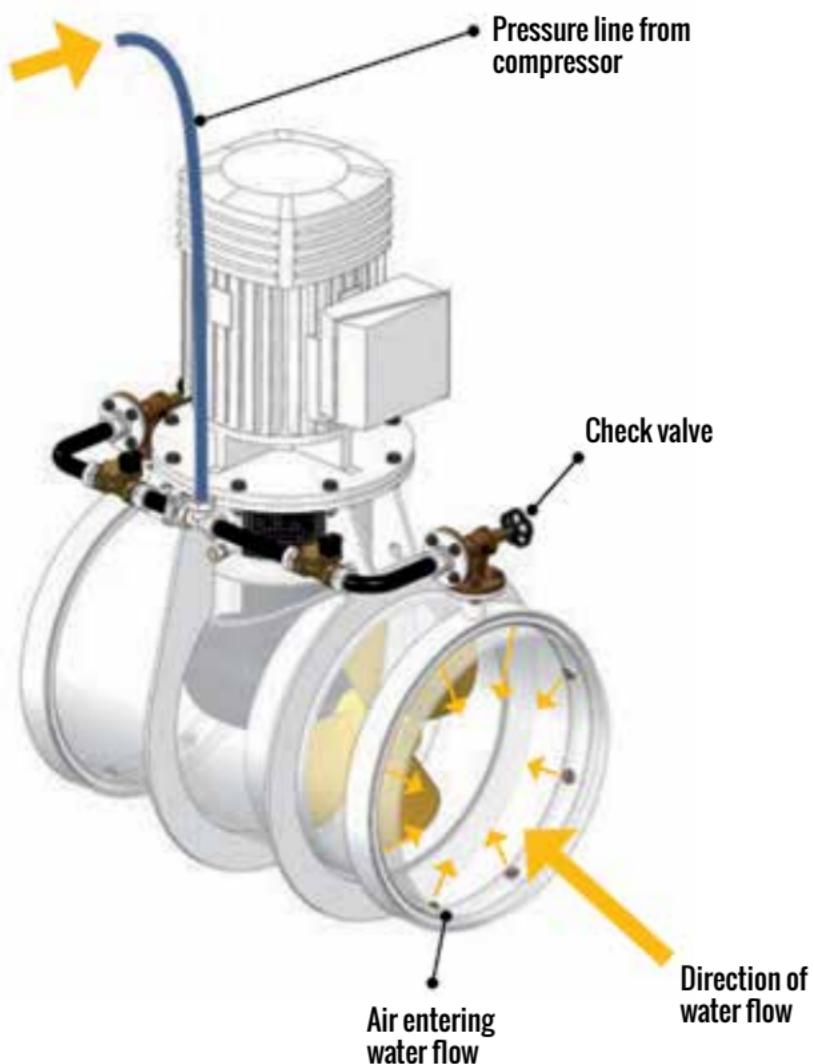

The thrusters can be mounted in a flexible suspension bottom well to suppress noise and vibration when operating. To create a flexible suspension, rubber isolation rings are inserted between the thruster foundation and the bottom well.

ACTIVE NOISE SUPPRESSION (ANS)

One of Veth Propulsion's solutions to keeping tunnel thruster noise levels to a minimum, besides flexible mounting of the thrusters, is by employing Active Noise Suppression by means of compressed air injection. Compressed air is injected into the thruster's tunnel in front of the propeller's direction of flow, thus minimizing the effects of cavitation.

ANS is a cost-effective way to decrease noise levels and cavitation damage in practically all new and existing tunnel thruster designs. Extensive testing has resulted in noise reductions up to 10 dB.

System activation - compressed air injected into tunnel's water flow

GLOBAL SERVICE

The Twin Disc Global Customer Support Program is committed to providing world-class support in the most efficient and consistent manner for all of our customers. Our regional sales offices and vast distribution network support Twin Disc products all over the world. With a corporate presence in every major market region, and our extensive and growing worldwide network of more than 157 distributor sales and service locations in 86 countries, you can rest assured you're never far from Twin Disc support.

Our program offers a wide range of services from the sales process through commissioning and eventually, upgrade. Twin Disc experts are always available, wherever you are, to help you obtain the best possible return on your investment in our products.

- Twin Disc
- Veth Propulsion
- HQ/Subsidiaries

For a current list of our global dealer network, please check twindisc.com/ vethpropulsion.com.

Training curriculum provided by the Twin Disc Global Customer Support Program is developed utilizing the latest information and is built upon decades of expertise. Group training in a classroom setting as well as hands-on training with electrical, mechanical and spin test stands provide the most in-depth training for all of our global technicians.

With our vast network of distributor and dealer locations around the world, Twin Disc offers you unprecedented service support. We can put engineering and service expertise on location virtually anywhere. We'll work with you on your particular application and product to ensure optimum results. We're more than just a name you know, Twin Disc is a name you can trust.

Wherever you are when you need support, simply call your local Twin Disc distributor. To find your nearest distributor, go to www.twindisc.com.
